

Forcepoint Data Security Cloud

Self-Aware Data Security for the AI Era

Enable secure innovation and confidently operationalize AI at scale through intelligent, adaptive visibility and control of sensitive data everywhere, without slowing your business.

Data Is Moving Faster Than Ever

AI, cloud expansion and hybrid work have reshaped how data is created, shared and accessed. Every prompt, agent decision and user interaction can alter data exposure in real time in ways traditional security models were not designed to manage.

Sensitive information now moves continuously beyond traditional controls. Organizations need more than point tools. They need an adaptive solution built for the speed and scale of AI-driven work.

Built to Move at the Speed of AI

Data Protection in Seconds

An integrated AI advisor helps teams deploy the right policies in seconds using natural language.

Tens of Millions of Files per Day

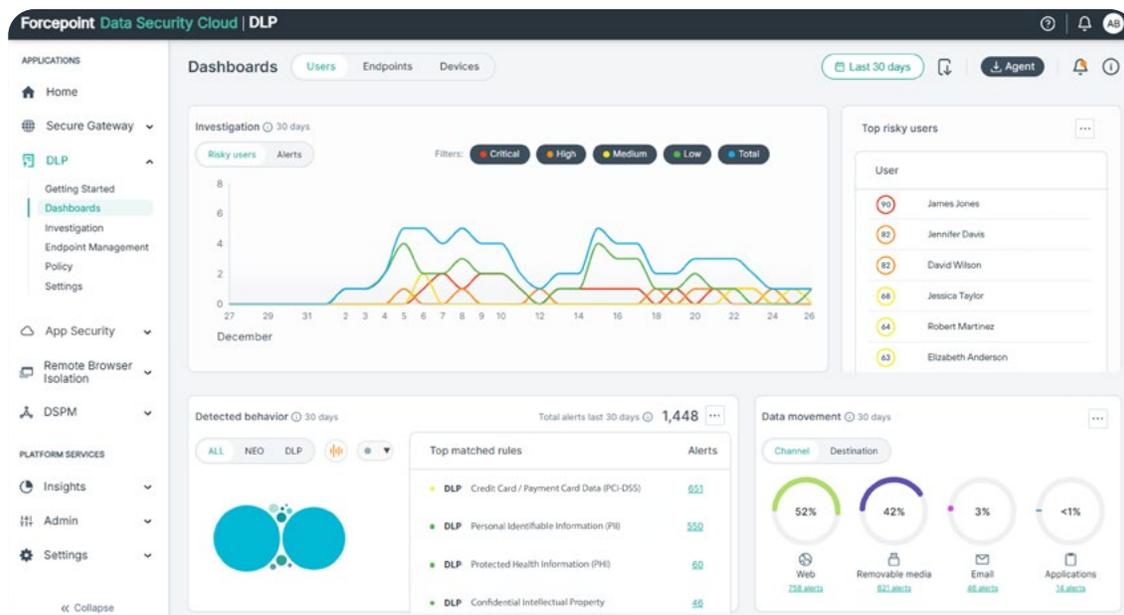

AI Mesh powered DSPM discovers and classifies structured and unstructured data across cloud and on-prem data stores.

Unified Policy Enforcement

Apply data security policies to tens of thousands of users in minutes and enforce consistently across channels and AI workflows.

Risk-Adaptive, Self-Aware Protection

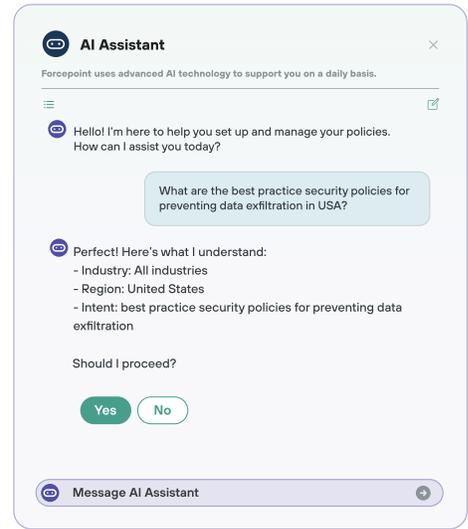

Continuously analyze user behavior, data sensitivity, and business context to adapt protection in real time.

An Always-On Security Advisor

Forcepoint’s integrated AI advisor ARIA provides continuous security guidance using natural language to recommend and deploy the right data protection policies.

By translating business intent into enforceable controls, teams can deploy policies directly from the assistant to accelerate time to value and enable faster, more confident decisions.

Data Security Everywhere powered by Forcepoint Data Security Cloud

A Modern, Continuous Approach

Forcepoint Data Security Cloud is an AI-powered, cloud-first platform that unites visibility and control of sensitive data to deliver Data Security Everywhere.

It brings discovery, classification, prioritization, remediation, and protection together on a single platform, continuously monitoring sensitive data at rest, in use, and in motion to detect and stop risks before they become breaches.

Forcepoint’s Self-Aware approach delivers unified visibility across data sources, consistent adaptive enforcement, and centralized reporting across every major channel, enabling organizations to innovate confidently while maintaining control of their most critical data.
