

# Agency Hosts Safe and Custom Environments for Business

Agency hosts more than 1,200 websites/applications and 7,000 domains for a wide range of businesses including retail, social media, manufacturing, and finance. To provide more individualized and secure services to its customers, the organization turned to Forcepoint Next Generation Firewall.

## Challenges

- Agency's proprietary ISP system required reliable network security to deliver high availability, secure connectivity, and individual account management for customers.

## Approach

- Forcepoint NGFW for superior performance, evasion protection, and mature multi-tenant capabilities.
- Forcepoint Security Management Center (SMC) with built-in features competitors lacked.

## Results

- Through Forcepoint NGFW's multi-tenancy capabilities, Agency is able to provide each client with its own secure, separate domain at a competitive price point.
- Forcepoint SMC's Web Portal Server enables customers to view live log data, allowing clients to troubleshoot connection/speed issues and stay informed of attacks targeting their web applications.
- Extremely robust log and reporting functionality, coupled with best-in-class alert and escalation management, means Agency can react 3x faster to incidents.
