**Forcepoint Data Classification powered by Getvisibility**

Leveraging AI to deliver highly accurate data classification for Forcepoint Enterprise DLP

- Leverage machine learning to classify data with high accuracy
- Enhance data loss prevention (DLP) with real-time classification
- Reduce unnecessary data loss prevention actions

**Features**
- Leverage AI to classify data
- Enhance DLP with real-time classification
- Reduce unnecessary actions

**Benefits**
- Minimize false positives and negatives
- Improve efficiency and accuracy of DLP processes
- Reduce the risk of data loss and breaches

**Forcepoint FlexEdge Secure SD-WAN**

Fully cloud-native SD-WAN solution extending protection to cloud applications, web traffic, and private applications

- Supports cloud, private, and on-premises environments
- Provides unified data loss prevention (DLP), security, and performance
- Enhances security and performance in a hybrid work environment

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Forcepoint ONE DLP**

Fully cloud-native DLP solution extending protection to cloud applications, web traffic, and private applications

- Delivers highly accurate data loss prevention (DLP) in the cloud
- Provides unified management across all environments
- Enhances security and performance in a hybrid work environment

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Forcepoint Risk-Adaptive Protection**

Cloud access security broker (CASB) solution for cloud access control and security in cloud applications

- Ensures security and compliance in cloud environments
- Provides visibility and control over cloud resources
- Simplifies management of cloud access control

**Features**
- Cloud: Ensures security and compliance in cloud environments
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Forcepoint Enterprise Data Loss Prevention**

Visibility and control over your people and data to protect your data models

- Provides visibility and control of data in motion and at rest
- Enhances security and performance in a hybrid work environment
- Simplifies management of data loss prevention

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Forcepoint Next-Generation Firewall (NGFW)**

Full-featured NGFW and secure SD-WAN solution

- Provides comprehensive security for cloud, network, and remote access
- Integrates with other Forcepoint solutions for a holistic security approach
- Enhances security and performance in a hybrid work environment

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Content Disarm and Reconstruction (CDR)**

Stop malware, known and unknown threats, and zero-day attacks

- Sanitizes documents at download and upload
- Isolates the web session from the user’s device
- Enforces policy and regulatory compliance

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Forcepoint ONE**

Security connects users to business applications and the cloud, seamlessly

- Ensures security and compliance in cloud environments
- Provides visibility and control over cloud resources
- Simplifies management of cloud access control

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Remote Browser Isolation (RBI)**

Isolate the web session from the user’s device

- Enforces policy and regulatory compliance
- Provides visibility and control over cloud resources
- Simplifies management of cloud access control

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Zero Trust Network Access (ZTNA)**

Ensure access control and data security for private applications

- Enforces policy and regulatory compliance
- Provides visibility and control over cloud resources
- Simplifies management of cloud access control

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Secure Web Gateway (SWG)**

Provides comprehensive protection for websites

- Sanitizes documents at download and upload
- Isolates the web session from the user’s device
- Enforces policy and regulatory compliance

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Cloud Access Security Broker (CASB)**

Enforce access control and data security for cloud applications

- Ensures security and compliance in cloud environments
- Provides visibility and control over cloud resources
- Simplifies management of cloud access control

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Secure Access to Private Web Apps**

Provides comprehensive protection for websites

- Sanitizes documents at download and upload
- Isolates the web session from the user’s device
- Enforces policy and regulatory compliance

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Forcepoint Data Visibility powered by Getvisibility**

Strengthen your data security management by getting a panoramic view into your data

- Leverage AI to classify data with high accuracy
- Enhance data loss prevention (DLP) with real-time classification
- Reduce unnecessary data loss prevention actions

**Features**
- AI-driven data classification
- Real-time data classification
- Increased efficiency and accuracy

**Benefits**
- Minimize false positives and negatives
- Improve efficiency and accuracy of DLP processes
- Reduce the risk of data loss and breaches

**Forcepoint Data Security**

Visibility and control over your people and data to protect your data models

- Provides visibility and control of data in motion and at rest
- Enhances security and performance in a hybrid work environment
- Simplifies management of data loss prevention

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Data-First SASE**

Security-first SASE solution for better security at the edge

- Provides comprehensive protection for websites
- Sanitizes documents at download and upload
- Isolates the web session from the user’s device
- Enforces policy and regulatory compliance

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Security Service Edge**

Security service edge (SSE) solution for better security at the edge

- Provides comprehensive protection for websites
- Sanitizes documents at download and upload
- Isolates the web session from the user’s device
- Enforces policy and regulatory compliance

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance

**Secure SD-WAN**

Fast, secure connectivity to the cloud that scales easily

- Provides comprehensive protection for websites
- Sanitizes documents at download and upload
- Isolates the web session from the user’s device
- Enforces policy and regulatory compliance

**Features**
- Cloud: Provides scalable and elastic resources
- Private: delivers high performance and security
- On-premises: integrates with existing infrastructure

**Benefits**
- Universal management across all environments
- Simplifies operations and reduces costs
- Enhances security and performance
