

# Office 365 Adoption Journey

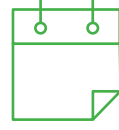

Many firms go through a similar journey when rolling out Office 365.

Follow the map to find out key phases, potential pitfalls and how to move forward to **full implementation**.

**START!**

## Pre-Adoption 1

CIO-org leads hybrid IT strategy planning  
CISO-org defines compliance goals and security architecture

## Adoption 2

IT transformation-org defines plan and obtains licensing  
IT begins rollout / migration

### Pitfalls

No time to visualize the big picture and how all the tool and policy details fit together

Don't build comprehensive security policies for non-email functionality

## Consumption 3

Users adopt the new platform and incorporate into daily workflow  
IT researches issues, unforeseen hurdles  
IT works with CISO/CIO to address gaps

### Pitfalls

Users find issues and start using Office 365 functionality for which no security policy is set

IT realizes they bought the wrong tools

## Reconciliation 4

IT implements architecture and tool changes  
Full Implementation

### Pitfalls

IT realizes they have over complicated their solution: they bought too many different tools and/or onboarded too many vendors

**FINISH!**
