

Operational Privacy Intelligence

Where Data Security Meets
Governance Confidence

The Challenge

- Complex data. Conflicting demands. Fragmented ownership.
- Teams protect data, govern risk, and answer regulators, too often with different tools, disconnected insights, and manual effort.

The Solution

- Continuous intelligence between security controls and governance decisions.
- Live security signals feed directly into structured privacy workflows, no swivel chair, no guesswork.

Data protection today is not just a technical problem. Organisations must protect, govern, and prove control over information across every environment, process, and regulation.

Security and privacy teams often work in separate silos. Security focuses on protecting data, while privacy and compliance focus on lawful processing and accountability. This separation creates gaps, duplication, and uncertainty.

The Forcepoint and PrivacyEngine partnership closes this gap. Together they provide an integrated environment that connects Forcepoint's real-time security visibility with PrivacyEngine's governance intelligence. Every decision, assessment, and record is informed by live data context.

Forcepoint and PrivacyEngine create a continuous link between data visibility, risk detection, and governance oversight.

Security insights from Forcepoint feed directly into PrivacyEngine, supporting every core privacy operation:

- **Records of Processing Activities (RoPAs)**
Accurate, current, and audit-ready, supported by live data classification and usage insights.
- **Data Subject Access Requests (DSARs)**
Fast, traceable, and compliant responses using verified discovery and mapping.
- **Data Incident and Breach Management**
Early detection combined with structured documentation and regulatory reporting.
- **Data Protection Impact Assessments (DPIAs)**
Evidence-based reviews powered by insight into data flows, categories, and risk.

The result is a connected governance ecosystem that turns privacy from a regulatory task into a proactive capability based on real intelligence.

The Impact

- From reactive controls to assured, explainable governance.

- Proactive compliance through alignment of data security and privacy obligations.
- Operational efficiency by reducing manual effort and improving collaboration.
- Transparency and trust through verifiable, evidence-based governance.
- Governance confidence supported by data-driven accountability.

Why It Matters

- Regulators expect proof. Customers expect trust. Boards expect certainty. We deliver all three, sustainably

- Move from static compliance to continuous accountability.
- Embed privacy by design into every data process.
- Bridge the gap between privacy, security, and legal functions.
- Build lasting trust with customers, regulators, and partners.

The Outcome

- Security. Privacy. Governance. Connected.

Forcepoint and PrivacyEngine provide the intelligence and structure to manage, protect, and govern data responsibly.

They help organisations turn privacy principles into daily practice and create measurable trust across their entire data landscape.
